7.1 Introduction

This chapter provides information on the object code classification and includes in Section 7.2 the list of object codes as follows:

- Objects of expenditure
- Objects for revenue and
- Objects for assets, liabilities and other transactions.

The object classification is a field of the government-wide coding block that identifies the type of goods or services acquired, the transfer payments made, the source of revenue or the cause of increases or decreases in assets and liabilities.

The object information provides:

- A method for classifying and coding transactions to permit the reporting of information about the nature of transactions in the Estimates and in the Public Accounts
- A standard classification of transactions for internal departmental analysis and central management purposes and
- The basis used by Statistics Canada to determine and report more accurately the impact of government revenues and expenditures on the rest of the economy. This information is based on Statistics Canada's North American Product Classification System (NAPCS) Canada 2017

In addition, the object coding provides a repository of government-wide information, which can be used by central agencies without requiring departments and agencies to respond to numerous individual requests.

7.1.1 Object classification structure

To accommodate the need for various degrees of detail, other levels of object classification are used. In descending order of aggregation after categories and standard objects, there are reporting objects and economic, source and class objects.

Categories (the first digit)

This is the highest level of object aggregation. There are mainly eleven categories in the lists of Objects and are as follows:

- **Objects** of expenditure comprise 4 categories, which are services, goods, land, buildings and works, transfer payments and other expenditures
- **Objects for revenue** comprise 2 categories, which are tax revenue and other revenue. Tax revenue consists of an object for tax revenues and other revenue is identified such as rights and privileges, leases, sales of goods and products, services, return on investments and miscellaneous other revenue
- **Objects for assets, liabilities and other transactions** comprise 5 categories, which are assets, liabilities, other, accumulated deficit and identification of partnering department for interdepartmental settlement transactions

Standard objects (01 to 12)

Standard objects are the highest level of object classification used for parliamentary and management purposes, and are used to report information in the Estimates and Public Accounts. They apply to expenditures only. (Refer to Section 7.1.4 for a brief explanation of each standard object as presented in the Estimates). The allocation of the categories by standard object is as follows:

Category 0 – Services includes the following standard objects:

- 01. Personnel
- 02. Transportation and communications
- 03. Information
- 04. Professional and special services
- 05. Rentals
- 06. Repair and maintenance.

Category 1 – Goods, land, buildings and works includes the following standard objects:

- 07. Utilities, materials and supplies
- 08. Acquisition of land, buildings, and works
- 09. Acquisition of machinery and equipment

Category 2 – Transfer payments include the following standard object:

- 10. Transfer payments

Category 3 – Other expenditures include the following standard objects:

- 11. Public debt charges
- 12. Other subsidies and payments

Sub-categories (the first two digits)

Sub-categories are a primary breakdown of each category. In many cases, they are the same as the standard objects.

Reporting objects (the first three digits)

Reporting objects are a sub-division of sub-categories, which are used for central management purposes.

Economic, source and class objects (the four digits)

Economic, source and class objects are the lowest levels of object classification used for government-wide reporting purposes. **Economic objects** apply to expenditures only and measure the impact of government transactions on the economy. The expenditures are classified according to the type of resources (goods and services) acquired or the transfer payments made. **Source objects** identify the origin of a receipt and apply to tax revenue and other revenue. **Class objects** identify the causes of increases or decreases to financial claims or obligations.

As most departments or agencies require more detail, transactions may be classified by departmental line object in the departmental system. To permit the consolidation and comparison of information from all departments, the line

objects must be aligned with the objects prescribed in Section 7.2.

7.1.2 Maintenance of object codes

List of objects

The object codes that are to be recorded for expenditures, revenue, assets, liabilities, and other transactions are listed on the government-wide chart of accounts (COA) website as Section 7.2. The list is updated regularly to include all changes made to the object codes.

List of descriptions

Interpretation and analysis of financial information require the classification and coding of transactions to be correctly and consistently applied.

To help departments and agencies improve accuracy and consistency in the coding of their financial transactions, the descriptions are included in the detailed list of object codes included in Section 7.2.

To maximize the use of the detailed descriptions, departments should review it carefully to ensure that the alignment of their line objects is correct. Where applicable, a copy of the relevant descriptions should also be made available to departmental personnel involved in coding to help ensure consistent coding and reporting, both within the department and within the government as a whole.

7.1.3 Pay entitlement codes

A pay entitlement code classifies the type of remuneration paid to employees pursuant to a collective bargaining agreement, the terms and conditions of employment, or other arrangements. These codes are issued to departments and agencies by Public Works and Government Services Canada (Compensation Sector). The pay entitlement codes are listed with the lists of Objects to improve consistency and accuracy in the alignment of pay entitlement codes to economic objects mainly in standard object 01. The list of pay entitlement codes is included in Section 7.4.

7.1.4 Brief definition of each standard object
