

## Incidence of CJD Deaths Reported by CJD-SS in Canada

As of February 28, 2009

| Year of Death     | Total CJD Cases | Population of Canada | Incidence Rate |
|-------------------|-----------------|----------------------|----------------|
| 1999              | 31              | 30,403,878           | 1.02           |
| 2000              | 35              | 30,689,035           | 1.14           |
| 2001              | 30              | 31,021,251           | 0.97           |
| 2002 <sup>1</sup> | 36              | 31,372,587           | 1.15           |
| 2003              | 29              | 31,669,150           | 0.92           |
| 2004              | 43              | 32,069,999           | 1.34           |
| 2005              | 42              | 32,378,122           | 1.30           |
| 2006              | 42              | 32,730,213           | 1.28           |
| 2007              | 29              | 33,091,228           | 0.88           |
| 2008 <sup>2</sup> | 13              | 33,223,840           | 0.39           |
| 2009 <sup>2</sup> |                 |                      | 0.00           |

**World Wide average occurrence of CJD is approximately 1-2 per million population**

NOTES:

1. As of September 2002, CJD cases include both definite and probable cases of CJD
2. Data from 1999 to 2007 are complete, and data for 2008 and 2009 are provisional
