

**VETERINARY HEALTH CERTIFICATE
EXPORT OF BREEDING CATTLE TO VIETNAM**

Exporting country: CANADA

Competent issuing authority: CANADIAN FOOD INSPECTION AGENCY

EXPORTER: _____

ADDRESS: _____

IMPORTER: _____

ADDRESS: _____

I, the undersigned Official Veterinarian, duly authorized by the Government of Canada, hereby certify, after due enquiry and to the best of my knowledge and belief, that the cattle described below meet the following requirements:

1. Canada is free from foot-and-mouth disease, rinderpest, contagious bovine pleuropneumonia, vesicular stomatitis lumpy skin disease, and does not vaccinate against these diseases. Canada is free of theileriasis (*T. Parva* and *T. annulata*).
2. With regard to bovine spongiform encephalopathy (BSE):
 - 2.1 Canada is classified by the OIE as a country with controlled risk with respect to BSE and complies with the conditions described in the "Terrestrial Animal Health Code".
 - 2.2 Canada has a mandatory national cattle identification program that allows traceability of cattle.
 - 2.3 Regulations prohibiting the feeding of ruminant origin meat and bone meal to ruminants have been enacted in Canada on August 4, 1997.
 - 2.4 The exported animals were born after the implementation of the ruminant feeding ban regulations in Canada.
3. The animals originate from farms/premises:
 - 3.1 which are officially free of brucellosis and tuberculosis,
 - 3.2 which are clinically free from infectious bovine rhinotracheitis (IBR), bovine virus diarrhoea (BVD), paratuberculosis (Johne's disease), leptospirosis, malignant catarrhal fever, enzootic bovine leukosis (EBL), hemorrhagic septicemia and Q fever for the last 12 months.
 - 3.3 where there have been no known cases of trichomoniasis or campylobacteriosis in bulls in the past 12 months.
4. With regard to anthrax:
 - 4.1 the exported animals showed no clinical sign of anthrax on the day of shipment, and
 - 4.2 were kept for the 20 days prior to shipment in an establishment where no case of anthrax was officially declared during that period.
5. Within 45 days prior to export, the exported animals were tested with negative results for the following diseases:
 - 5.1 Paratuberculosis - CF test at 1:10 dilution or ELISA
 - 5.2 Enzootic bovine leukosis - ELISA
 - 5.3 Trichomoniasis and campylobacteriosis - culture of preputial washings
Note: Testing required for bulls over 12 months of age only.
 - 5.4 Bluetongue - ELISA

5.5 Leptospirosis a) Microtiter agglutination test at a 1:100 dilution for *L. Canicola*, *L. Grippotyphosa*, *L. Hardjo*, *L. Icterohaemorrhagiae*, and *L. Pomona*, * or

b) The animals were vaccinated for leptospirosis within 30 days prior to export *

Name of vaccine: _____

Date of vaccination: _____ or,

c) Treated with long-acting oxytetracycline at a dose of 20 mg/kg within 30 days prior to export. *

Product name: _____

Dosage: _____

6. The animals were treated against internal and external parasites with approved products within thirty (30) days of departure.

7. The animals were examined prior to departure and found free of evidence of infectious or contagious diseases.

8. The animals were transported in clean vehicles to the point of embarkation without coming into contact with animals of lesser health status.

* Delete as appropriate
