

**VETERINARY HEALTH CERTIFICATE
EXPORT OF CAMELIDAE TO THE UNITED STATES OF AMERICA**

OWNER: _____

ADDRESS: _____

PURCHASER: _____

ADDRESS: _____

NUMBER OF ANIMALS CERTIFIED FOR EXPORT: _____

I hereby certify to the best of my ability from the information that has been provided to me that:

1.
 - a) The animals have resided in Canada or the United States from birth or were legally imported into Canada from another region and have been free of any import quarantine or health related restrictions and able to move freely within Canada's national herd for a minimum of sixty (60) days prior to export.
 - b) If the camelids are offspring of animals legally imported into Canada from another region, they have been free of any import quarantine or health related restrictions and able to move freely within Canada's national herd for a minimum of ninety (90) days prior to export.
 - a) The animals have been resident of the herd of origin in Canada for a minimum period of sixty (60) days prior to export and do not originate from a premises containing ruminant or swine species that are not part of a herd recognized by CFIA to be tuberculosis free.
 - b) Neither *Mycobacterium bovis*, *Mycobacterium tuberculosis* nor *Brucella abortus* has been diagnosed clinically, by diagnostic test, or by post mortem examination in a llama or alpaca on the premises of origin within the three (3) years preceeding the issuance of the export health certificate nor in the herd of origin at any time.
2. Unless at the foot of their dam, all animals are at least six (6) months of age and fully weaned at least one (1) month prior to export. Animals less than six (6) months of age and travelling at the foot of their dam are identified on this health certificate and meet the required health status but were not tested for tuberculosis or brucellosis.
3. During the 60-days prior to export, the camelids to be exported have had no direct or indirect contact with any animals that are not of equivalent health status.
4. The animals were tested for the following diseases with negative results:
 - 4.1 Bovine tuberculosis (*Mycobacterium bovis*) - within sixty (60) days of export, each animal was tested with negative results using the single intradermal test at the post-axillary site.
 - 4.2 Bovine brucellosis (*Brucella abortus*) - within thirty (30) days preceding the date of export, each animal was tested with negative results using a test prescribed by the World Organisation for Animal Health (OIE).
5. Upon inspection immediately prior to departure for export to the United States, the camelids showed no clinical signs of communicable disease.
6. Animals being exported to the United States will be transported in cleaned and disinfected trucks directly from the premises of origin to the USDA port of entry.

Identification of the Camelidae:

Permanent ID*	DESCRIPTION (including species and breed)	AGE	SEX

* If a microchip transponder is used, an electronic reader capable of reading the microchip must accompany the animal(s) to the United States port of entry.
