SECTION II -HEALTH INFORMATION

I, the undersigned Official Veterinarian, designated by the competent central authority of Canada, certify that after due enquiry and to the best of my knowledge and belief, the animal described below complies with the following conditions:

1. The horse originates from Canada, a country which has been free from glanders and African horse sickness for the preceding five (5) years.
2. The premises of origin has been free of dourine, equine epizootic encephalomyelitis, equine infectious anemia, epizootic lymphangitis and equine piroplasmosis for the preceding twelve (12) months.
3. The premises of origin has been free of contagious equine metritis, horse pox, infectious arteritis of horses, strangles, pseudoglanders, equine rhinopneumonitis and salmonella abortus equi for the preceding six (6) months.
4. Canada has been free of vesicular stomatitis for the previous year.

5. The horse was maintained on a premises approved by the Canadian Food Inspection Agency as a pre-embarkation quarantine facility for a minimum of fourteen (14) days prior to departure, subject to supervision by a veterinary inspector of the Canadian Food Inspection Agency and during this time was subjected to the following tests with negative results:

Date of Test

- i) equine piroplasmosis - CFT _____
- ii) equine infectious anemia - immunodiffusion test _____
- iii) contagious equine metritis - bacteriological culture test from the reproductive organs shall be carried out at least three (3) occasions at intervals of not less than seven (7) days (The test may be dispensed from the animal under the age of two (2) or gelding.)
 1st culture: _____
 2nd culture: _____
 3rd culture: _____
- iv) equine viral arteritis - serum neutralization test _____
- v) salmonellosis (Sal. abortus equi) - tube agglutination test _____
- vi) vesicular stomatitis - SNT _____

N.B. a) Canada has been free of contagious equine metritis, vesicular stomatitis and piroplasmosis for 5 years.
 b) The district has been free of the following diseases mentioned for 5 years:
 List _____

When freedom is identified in both cases (Canada and district), testing is not required; indicate N/A.

6. West Nile virus:
 i) the horse come from premises where no case of West Nile virus has been present for at least 6 month prior to export and was maintained on a mosquito-proof premises approved by the Canadian Food Inspection Agency as a pre-embarkation quarantine facility for a minimum of fourteen (14) days prior to departure, subject to supervision by a veterinary inspector of the Canadian Food Inspection Agency and during this time was subjected to the following test with negative result:
 West-Nile virus-ELISA test: _____ (Date of test)

or (delete unused option)

- ii) Using an inactivated vaccine and one of the vaccination regime mentioned below, the horse has been:
 - a) vaccinated twice at an interval of 21 to 42 days, with the second vaccination carried out within 30 to 60 days prior to export,
 - or**
 - b) has been vaccinated annually against West Nile virus and a booster carried out within 30 to 60 days prior to export:

In both cases, indicate the last two dates of vaccination: 1st vaccination date: _____

2nd vaccination date: _____

7. The horse was examined during the pre-embarkation quarantine period and remained clinically healthy.

8. The animal was/was not vaccinated against equine influenza. (Delete as appropriate.)

9. The horse was transported to the place of loading without contacting animals other than those which meet the provisions for export to Taiwan in vehicles that have been cleaned and disinfected. The horse shall not be transhipped through a country where glanders is known to exist.

This certificate is valid until: _____
