Acquire Marks (Scars, tattoos, freezemarking etc.):

Instructions: Please ensure that the diagram and written description agree.
White markings to be shown in red.
Whorls to be marked as (x).
Scars to be marked and indicated with an arrow (->).
If no markings, mark this as (0).

I, the undersigned, being a duly authorized Veterinary Officer of the Government of Canada, hereby certify:

1. Canada is free of Foot and Mouth Disease, vesicular stomatitis, contagious equine metritis, African horse sickness, dourine, glanders, surra and Venezuelan equine encephalomyelitis.
2. The horse has been in Canada during the sixty (60) days preceding export or since birth.
3. Insofar as can be determined, during the last six (6) months the animal has not been in any country which:
 - a) African Horse Sickness has occurred in the last two (2) years or in which vaccination against African Horse Sickness has been practiced for the past two (2) years.
 - b) Venezuelan Equine Encephalomyelitis has occurred during the past two (2) years.

4. During the past three (3) months, the horse has not suffered from any of the diseases listed below, nor has this horse during this period been on any premises where these diseases occurred: Vesicular Stomatitis, Anthrax, Contagious Equine Metritis, Dourine, Epizootic Lymphangitis, Ulcerative Lymphangitis, Equine Infectious Anemia, Equine Rhinopneumonitis, Equine Viral Arteritis, Equine Viral Encephalomyelitis, Glanders, Rabies, Scabies or any other disease of horses statutorily notifiable in Canada.
5. The horse must undergo a minimum isolation of twenty-one (21) days under the supervisions of the Canadian Food Inspection Agency immediately prior to export. During this time samples were taken from the horse and sent to a laboratory approved by CFIA where they were subjected to the following tests with negative results:
 - a. Equine Infection Anemia - AGID
 - b. Equine Viral Arteritis - SN (negative is a reaction at a dilution equal to or less than 1 in 4)
 - c. Potomac Horse fever - indirect fluorescent antibody test
6. The horse has **not** been vaccinated against Equine Viral Arteritis.
7. The horse has **not** been vaccinated against Equine Encephalomyelitis during the past thirty (30) days and there has been no outbreak of Equine Encephalomyelitis within a thirty (30) kilometer radius of the place of isolation with the past six (6) months;
8. The horse has been fully immunized with inactivated vaccine against Equine Rhinopneumonitis and Equine Influenza within the past ninety (90) days.
9. The horse has been inspected on the premises of origin within forty-eight (48) hours of exportation and found to be in good health and free from symptoms of infectious or contagious disease.

Additional Certification for Breeding Animals

Mares: So far as it is possible to ascertain, the animal has not been bred to a stallion known to have been infected with the C.E.M. organism (*Taylorella Equigenitalis*) and the organism has never been isolated from this mare.

Stallions: So far as it is possible to ascertain, the C.E.M. organism has never been isolated from this stallion

Note: The animal must be conveyed directly from the place of isolation to Barbados without coming into contact with horses not similarly certified in a vehicle previously cleaned and disinfected with a product approved by CFIA.
