VETERINARY HEALTH CERTIFICATE

EXPORT HORSES TO EGYPT

SECTION I - IDENTIFICATION OF THE ANIMAL

Name _____

Breed _____

Age _____

Sex _____

Coat Colour _____

I.E.F. Passport _____

DISTINCTIVE MARKS

Head _____

Limbs _____

LF _____

RF _____

LH _____

RH _____

Body _____

ACQUIRED MARKS (Scars, tattoos, freemarking etc.)

INSTRUCTIONS:

Please ensure that the diagram and written description agree.
White markings to be shown in red.
Whorls to be marked as (x).
Scars to be marked and indicated with an arrow (->).
If no markings, mark this as (0).

SECTION II - ORIGIN AND DESTINATION OF ANIMALS

The horse was shipped from _____
Place of shipment

directly to _____
Place of destination

by train/truck/plane/boat _____

Indicate the mode of transport and name or flight number, whichever is the case.

Name of Exporter _____

Address _____

Name of Consignee _____

Address _____

SECTION III

I, the undersigned, certify that the animal described above meets the following conditions:

- a) It originates from a country where the following diseases are reportable: African horse sickness, dourine, glanders, equine encephalomyelitis (all forms including VEE), infectious anemia, vesicular stomatitis, rabies and anthrax.
- b) The animal was examined on this day and did not show any clinical signs of disease.
- c) The animal is not to be destroyed under a national eradication program for an infectious or contagious disease.
- d) During the three (3) months preceding export the animal has resided on premises under veterinary surveillance in Canada, and during the thirty (30) days preceding export, the animal was placed in isolation.
- e) The animal originates from Canada where:
 - i) Venezuelan equine encephalomyelitis has not occurred during the last two (2) years;
 - ii) dourine has not occurred during the last six (6) months;
 - iii) glanders has not occurred during the last six (6) months;
 - iv) vesicular stomatitis has not occurred during the last six (6) months;
 - v) equine viral arteritis - in the case of an intact male older than 180 days
 - the disease has not been reported during the last six (6) months, or
 - the animal was serologically tested within twenty-one (21) days of export
on _____ (date) by a virus neutralization test for EVA with a negative result at a dilution of 1:4, or
 - the semen of the animal was tested within twenty-one (21) days of export
on _____ (date) by a virus isolation test for EVA with negative results, or
 - the animal was vaccinated on _____ against EVA under official veterinary supervision with a vaccine approved by the competent authority, according to the following program for initial vaccination and has been re-vaccinated at regular intervals.

- *NOTE - delete programs that do not apply to the animal described.
- verify supporting certification on testing before vaccination or re-vaccination;
- a) vaccination was carried out on the day a blood sample was taken and tested negative at a dilution of 1:4 by a virus neutralization test; or
 - b) vaccination was carried out during a period of isolation under official veterinary supervision commencing on the date a blood sample was taken and tested negative at a dilution of 1:4 by a virus neutralization test, the vaccination to be done within 15 days of the test; or
 - c) vaccination was carried out when the animal was between 180 to 270 days of age during a period of isolation under official veterinary supervision. During the isolation period two blood samples were taken at least 10 days apart proving a stable or declining antibody titre in a virus isolation test for EVA.

- f) The animal does not originate from any part of Canada considered infected with African horse sickness (Canada is free) and has not been vaccinated.
- g) The animal does not originate from a farm nor has it had contact with any horses which are the object of an investigation for health reasons such as:
 - i) in the case of equine encephalomyelitis - during the six (6) months from the time the infected animals were removed;
 - ii) in the case of infectious anemia - during the time necessary to remove the infected animals and the period required to conduct two (2) negative tests (ELISA or Coggins) with an interval of three (3) months between tests;
 - iii) in the case of vesicular stomatitis - during the six (6) months.
 - iv) in the case of rabies - during one (1) month from the last case.
 - v) in the case of anthrax - during the fifteen (15) days from the last case.

N.B. In the case where all of the animals susceptible have been removed and the place has been disinfected, the time period required before export can take place is thirty (30) days from the date of removal and completion of disinfection except in the case of anthrax where the period is fifteen (15) days.

- h) The animal shows no signs of contagious equine metritis and does not originate from a premise which has been suspected of CEM during the last two (2) months or has not been in direct or indirect contact for breeding with animals suspected or infected with CEM. Canada is free of CEM.
- i) To the best of my knowledge, the animal has not had contact with horses suffering from an infectious or contagious disease during the fifteen (15) days preceding the signing of this document.
- j) The animal was subjected to an ELISA or Coggins test during the thirty (30) days preceding export with a negative result on _____ (date).
- k) The animal has not been vaccinated for Venezuelan equine encephalitis.
- l) The animal has been vaccinated for Eastern and Western encephalitis using an inactivated vaccine on _____ (date) during the previous six (6) months but more than thirty (30) days from the date of export.

If the animal is not vaccinated, it was subjected to two (2) negative hemagglutination inhibition tests for Eastern and Western encephalitis at a twenty-one (21) day interval with second sample being taken during the ten (10) days preceding export. _____ and _____
(Date of 1st) (Date of 2nd)

In the case of an animal which was vaccinated more than six (6) months ago, there should be no significant increase in the two (2) titres.

m) it was not vaccinated against West Nile Virus, or

it was vaccinated against West Nile Virus with an inactivated vaccine on at least two occasions at an interval of between 21 to 42 days, the last vaccination being carried out not later than 30 days prior to dispatch on

Delete that which is not used.

SECTION IV

The animal will be shipped in a vehicle which has been cleaned and disinfected with a disinfectant recognized in Canada.

SECTION V

This Certificate is valid for ten (10) days from the date of signature.

OWNER'S DECLARATION

I, the undersigned, _____ declare that:
(capital letters)

- 1) The animal will be shipped from the point of shipping to the point of destination without coming into contact with horses not of equal health status and be done in a manner which maintains the health and well being of the animals.
- 2) The animal has either been in Canada since birth or since entry if it was legally imported during the previous three (3) months or has been in Canada for at least ninety (90) days before the date of this declaration.
