

**VETERINARY HEALTH CERTIFICATE
EXPORT OF SWINE TO THAILAND**

Exporter: _____

Importer: _____

Address: _____

Address: _____

Owner: _____

Premises of origin: _____

Address: _____

I, the undersigned Veterinarian, duly authorized by the Government of Canada, hereby certify that:

Section I: General Health Requirements

1. The animals originate from Canada, a country free from African swine fever, classical swine fever, enterovirus encephalomyelitis (Teschén disease), Aujeszky's disease, brucellosis (*B. suis* and *B. abortus*) and rinderpest. Canada has been recognized free of foot-and-mouth disease, without vaccination, by OIE for a minimum of three (3) years prior to export.
2. The animals originate from premises where no clinical signs or other evidence of porcine reproductive and respiratory syndrome (PRRS) has been found during the two (2) years prior to export and vaccination against PRRS is not permitted on the farm.
3. During the twelve (12) months prior to export, no clinical signs or other evidence of tuberculosis, brucellosis, leptospirosis, swine vesicular disease, vesicular exanthema, swine influenza, porcine parvovirus infection, enterovirus encephalomyelitis, transmissible gastroenteritis, atrophic rhinitis, toxoplasmosis, trichinosis and streptococcus suis type 2 infection has been found at the premises where the animals originated and/or has been resident.

Section II: Quarantine, Testing and Treatments

4. All animals to be exported to Thailand were subjected to isolation in an approved premises under the control of an official veterinarian of the Canadian government for a period of at least thirty (30) days prior to export and during that period, the animals were tested for the following diseases using test methods or other methods recommended by the World Organisation for Animal Health (OIE), with negative results.
 - i) Transmissible gastroenteritis - SN or ELISA
 - ii) Porcine respiratory and reproductive syndrome - ELISA
 - iii) Leptospirosis - microscopic agglutination test (MAT)

Or

The animals were treated with two (2) injections of dihydrostreptomycin (25 mg/kg of live body weight) at a fourteen (14) day interval with the second injection being given the last working day before shipment. Or the animals have been treated with an alternate antibiotic, at the manufactures recommended dosage, that is efficacious in the treatment of leptospirosis.

Antibiotic Name _____;

Dosage _____;

Manufacturer _____.

- iv) Atrophic Rhinitis - The animals for export were tested for atrophic rhinitis by ELISA or PCR with negative results in a laboratory approved for this purpose;

Or

The farm of origin has a monitoring program for atrophic rhinitis and is free from this disease.

5. The animals were treated with an approved broad spectrum anthelmintic and external parasiticide during the isolation period.

Product Name _____;

Dosage _____;

Manufacture _____.

Section III: Transport

6. The animals have been examined immediately prior to departure and were found to be clinically healthy and showed no evidence of infectious or contagious disease including ecto-parasites at the time of export and are fit to travel.
7. The vehicles and container used for transporting the export animals have been thoroughly vacated, cleaned and disinfected immediately prior to loading according to recommendations of the OIE.
8. The accommodations provided for the animals during shipping have been designed to avoid any risk of injury and unnecessary suffering and is in compliance with the relevant criteria laid down in the OIE Appendix titled "Transport of Animals" or Part XII of the Canadian Health of Animals Regulations.

SAMPLE

I, the undersigned Veterinarian, duly authorized by the Government of Canada, hereby certify that the exporter has read, understood and has shown evidence that appropriate measures will be taken to fulfill the six (6) conditions listed below during the transportation of the animals to Thailand:

Information transmitted to the exporter

1. After leaving the Canadian territory, the ship/aircraft or other vehicles carrying the animals may only call at intermediate ports pre-approved by the Thailand veterinary authorities;
2. While in transit, the animals must not come in contact with other animals of lower health status.
3. Unloading or movement of the animals may only take place under the approval and supervision of the veterinary authorities of the transit country;
4. No swine or other animals of lower health status, animal feed or fodder is allowed to be taken on board the ship/aircraft after leaving the Canada;
5. The accommodation provided for the animals during shipping must be designed to avoid any risk of injury and unnecessary suffering which is compliance with the relevant criteria laid down in the Appendix titled "Transport of Animals" of the World Organisation for Animal Health (OIE) or Part XII of the Canadian Health of Animals Regulations.
6. For the import of breeding animals to Thailand the animal pedigree certificate shall accompany the shipment.
