

**VETERINARY HEALTH CERTIFICATE
EXPORT OF GOATS TO BARBADOS**

COUNTRY OF ORIGIN: CANADA

EXPORTER: _____

ADDRESS: _____

IMPORTER: _____

ADDRESS: _____

I, the undersigned Veterinary Officer, duly authorized by the Government of Canada, hereby certify that:

1. Canada is free of foot-and-mouth disease, sheep and goat pox and bluetongue (except for the Okanagan Valley).
2. The animals originated from Canada, a country in which *Brucella melitensis* has never been diagnosed.
3. The animals originate from a herd where scrapie has not been clinically diagnosed in the past 5 years.
4. The animals originate from a herd where BSE has not been diagnosed in the past 3 years.
5. The animals originate from a herd where there has been no clinical evidence of contagious ecthyma during the past 12 months.
6. The animals showed no clinical signs of contagious agalactia on the day of shipment and originated from farms where no clinical case of contagious agalactia occurred during the last 6 months.
7. The animals showed no clinical sign of anthrax on the day of shipment, and were kept for 21 days prior to shipment in an establishment where no case of anthrax was officially declared during that period.
8. No clinical cases of caprine arthritis/encephalitis was found in the herd of origin during the past 3 years. The animals have been tested with negative results for CAE, during the 30 days prior to export, using the ELISA method, and if under 12 months of age, the dam has also tested negative for CAE.
9. The animals have been tested with negative results for the following diseases within 21 days of export:
 - Tuberculosis - intradermal skin test
 - Bluetongue - ELISA
 - Brucellosis - Buffered Plate Agglutination Test (BPAT) or Fluorescent Polarization Assay (FPA)
 - Leptospirosis - Microagglutination test (MAT) (*L. pomona*, *L. icterohemorrhagiae*, *L. grippityphosa*, *L. hardjo*, *L. sejroe*) *
 - or**
 - The animals received an antimicrobial agent recognized as effective against leptospirosis at the dosage recommended by the manufacturer and/or as supported by scientific literature.*
- * **strike out and initial as appropriate**
10. The animals have been given a complete course of vaccination within 20-60 days prior to export against blackleg, malignant edema, clostridial enterotoxemia, and tetanus
11. The animals have been treated for internal and external parasites, with a drug approved for use in livestock in Canada, within 72 hours of export.
12. The animals have been held in a pre-export quarantine (PEQ), under CFIA supervision for a minimum of 21 days immediately prior to export, and have not come into contact with animals of a lesser health status.
13. The animals have been inspected within 48 hours of departure and have been found to be physically sound and free from symptoms of infectious or contagious diseases.
14. The vehicle transporting the animals was cleaned and disinfected prior to loading.
15. The animals have been transported directly from the PEQ to the port of departure without coming into contact with animals of a lesser health status.

16. Identification of the Animals:

Eartag	Age	Sex	Breed	Description

Date (yyyy-mm-dd)

Official Veterinarian
Canadian Food Inspection Agency
