

VETERINARY HEALTH CERTIFICATE

EXPORT HORSES TO JAMAICA

EXPORTER: _____

ADDRESS: _____

IMPORTER: _____

ADDRESS: _____

I, the undersigned, being an official veterinarian designated by the competent central authority of Canada, certify that after due enquiry and to the best of my knowledge and belief, the animals described below meet the following requirements:

1. The animal(s) was/were born in Canada or have been resident in Canada for the past twelve (12) months.
2. Canada is free from foot-and-mouth disease, vesicular stomatitis, dourine, glanders, African horse sickness and contagious equine metritis.
3. The horse(s) has/have not been in contact with any horse(s) imported from countries affected with contagious equine metritis (CEM) within six (6) months prior to exportation and they were not affected with CEM during the twelve (12) months preceding their exportation.
4. As far as can be ascertained no case of dourine, mal de Carderas, glanders, epizootic lymphangitis, equine infectious anemia, equine rhinopneumonitis, contagious equine metritis, equine encephalomyelitis or Mange occurred on the premises or within a radius of fifteen (15) miles of where the animal(s) were kept for at least the sixty (60) days prior to exportation.
5. The animals have been subjected to the following tests with negative results for the diseases specified.
 - i) equine infectious anemia - immunodiffusion test within six (6) months of departure.
Date of Test _____
 - ii) piroplasmosis - complement fixation test within thirty (30) days of departure.
Date of Test _____
 - iii) equine viral arteritis - for stallions only (titre not to exceed 1:8) within thirty (30) days of departure.
Date of Test _____
6. Vaccinations:
 - i) Eastern and Western Encephalomyelitis - at least thirty (30) days prior to shipment;
 - ii) Equine Influenza - using an inactivated multi-strain vaccine (A1 and A2) within three (3) months of exportation;
 - iii) Equine Rhinopneumonitis - using an inactivated vaccine giving two (2) doses at a thirty (30) day interval between doses. To be done within sixty (60) days of exportation;
 - iv) Tetanus - within thirty (30) days of exportation.
7. The animals have been examined and found to be healthy with no clinical evidence or symptoms of infectious or contagious disease.
