

**VETERINARY HEALTH CERTIFICATE  
EXPORT BOVINE SEMEN TO KOREA**

**SECTION I**

- i) **Country of origin:** CANADA
- ii) **Issuing Authority:** CANADIAN FOOD INSPECTION AGENCY  
GOVERNMENT OF CANADA
- iii) **Region:** \_\_\_\_\_
- iv) **Name of Consignor:** \_\_\_\_\_  
**Address:** \_\_\_\_\_  
\_\_\_\_\_
- v) **Name of Consignee:** \_\_\_\_\_  
**Address:** \_\_\_\_\_  
\_\_\_\_\_

**SECTION II**

- i) **Name of A.I. Centre (where semen collected):** \_\_\_\_\_  
\_\_\_\_\_  
**Address:** \_\_\_\_\_  
\_\_\_\_\_

**SECTION III - Donor Bull Identification:**

- i) **Name of Breeder:** \_\_\_\_\_  
**Address:** \_\_\_\_\_  
\_\_\_\_\_
- Total number of straws in consignment:** \_\_\_\_\_
- Method and Degree of Dilution:** \_\_\_\_\_  
\_\_\_\_\_
- Markings on approved seal placed on shipping containers:** \_\_\_\_\_

**SECTION IV**

I, the undersigned, duly authorized veterinarian of the Canadian Food Inspection Agency, do hereby certify that:

1. Canada has had no outbreak of foot-and-mouth disease, rinderpest, contagious bovine pleuropneumonia, African swine fever, Teschen disease or vesicular stomatitis and the donor bull from which the semen was collected for export has not been vaccinated against the aforesaid.
2. The Artificial Insemination Centre has been periodically supervised and directed by Veterinarians of the CFIA.
3. The donor bull and all other artiodactylous animals in the same herd have been found healthy and free from brucellosis, tuberculosis, Johne's disease, leptospirosis, bluetongue, vesicular stomatitis, BVD, vibriosis, trichomoniasis and enzootic bovine leucosis.

4. a) The donor bull has been subjected to tests for the following diseases within six (6) months (semi-annual) collection for Korea, with negative results:
- i) brucellosis - serum agglutination test (negative at 1:50);
  - ii) leptospirosis - agglutination-lysis test (less than 50% at 1:100);
  - iii) bluetongue - ELISA;
  - iv) epizootic haemorrhagic disease-agar gel immunodiffusion and serum neutralization tests;
  - v) enzootic bovine leucosis - AGID or ELISA test; <sup>(1)</sup>
  - vi) vibriosis (Campylobacter) - bacteriological culture test of preputial cavity washings;
  - vii) trichomoniasis - microscopic examination of preputial cavity washings or culture. <sup>(1)</sup>
- In addition to the testing done on a semi-annual basis, all animals on the premises are subject to the following tests every twelve (12) months:
- i) tuberculosis- intradermal (caudal fold) test with bovine PPD tuberculin:
  - ii) paratuberculosis (Johne's) - ELISA or complement fixation test; <sup>(1)</sup>
- b) The donor bull was examined and found to have no clinical evidence of IBR and was serologically tested (according to the Canadian standards) either:
- i) with negative results; <sup>(1)</sup>
  - or**
  - ii) with positive results - in which case a culture test of an aliquot of semen has shown negative results. <sup>(1)</sup>
- c) The donor animal was tested for BVD by virus isolation with negative results prior to entering the artificial insemination centre and as a resident animal has been tested according to the Canadian Artificial Insemination Program, in compliance with the Office International des Epizooties, Terrestrial Animal Health Code, Article 3.2.1.5.
5. Sanitary precautions were observed to prevent contamination of the semen and dilution material with any agents causing infectious diseases of domestic animals.
6. Each ampoule or straw of semen for export has permanent markings showing the donor bull's registered name and number and collection date of the semen.
- <sup>(1)</sup> Delete unused option.
