REVIEW NOTICE

This performance summary of metal mines subject to the *Metal Mining Effluent Regulations* has been reviewed by officials of the Mining Section, Environment Canada, and approved for public release. Approval does not necessarily signify that the contents reflect the views and policies of Environment Canada.

The data used in this summary review were provided to Environment Canada under section 22 of the Regulations, which requires mines to submit annual reports to Environment Canada. The data were compiled by staff of the Mining Section of Environment Canada and are presented as provided by the mines from their submitted annual reports. In some cases, quarterly reports were used by Environment Canada staff to complete missing information that was not properly reported by the owners or operators of some mines.

This summary has been compiled to inform the regulated community, other stakeholders and the interested public on the performance of mines subject to the Regulations in 2009. The material has been prepared for informational purposes only. For all purposes of interpreting and applying the law, users should consult the Regulations, as registered by the Clerk of the Privy Council and published in Part II of the *Canada Gazette*.

ABSTRACT

This review summarizes the performance of Canadian metal mines with respect to selected standards prescribed by the *Metal Mining Effluent Regulations*, which were registered on June 6, 2002, and came fully into force on December 6, 2002.

This is the seventh annual summary of performance with respect to the Regulations. In addition to detailed mine effluent quality data, the report includes various tables and graphs synthesizing the compliance data based on exceedances, jurisdictions and mining subsectors. Summary tables are also provided on the same basis for both rainbow trout acute lethality and *Daphnia magna* monitoring tests. This performance review of mines is limited in that it does not include an overview of the main requirements of the Regulations. The electronic version of this summary review is available through Environment Canada's online publications catalogue at www.ec.gc.ca.

RÉSUMÉ

La présente évaluation sommaire porte sur la performance des mines de métaux canadiennes et repose sur certaines normes prescrites par le *Règlement sur les effluents des mines de métaux* (REMM), lequel a été enregistré le 6 juin 2002 et est entré en vigueur dans son ensemble le 6 décembre 2002.

Elle constitue la septième évaluation sommaire annuelle de la performance relativement au *Règlement*. Outre des données détaillées sur la qualité des effluents, le rapport comprend divers tableaux et graphiques dans lesquels les données sur la conformité sont résumées, selon les dépassements, la province ou le territoire et le sous-secteur minier. Il comprend également des tableaux sommaires dans lesquels on présente de la même manière les résultats des essais de détermination de la létalité aiguë chez la truite arc-en-ciel et des essais de suivi avec bioessais sur la *Daphnia magna*. La portée de la présente évaluation sommaire est limitée, c'est-à-dire qu'elle ne renferme aucun aperçu des principales exigences figurant dans le *Règlement*. La version électronique de cette évaluation sommaire est disponible à partir du répertoire des publications en ligne d'Environnement Canada à l'adresse : www.ec.gc.ca.

SUMMARY

This review summarizes the performance of Canadian metal mines with respect to the selected standards prescribed by the *Metal Mining Effluent Regulations*, which came fully into force on December 6, 2002.

The Regulations require sampling of effluent and the submission of quarterly and annual reports of results within specified time limits. The data used in this review were provided to Environment Canada under section 22 of the Regulations, which requires mines to submit annual reports to Environment Canada. The format for these reports is specified in Schedule 6 of the Regulations. The reports include

- monthly mean concentrations for metals and total suspended solids;
- monthly pH range; and
- summary results of rainbow trout acute lethality tests and *Daphnia magna* monitoring tests.

In 2009, 104 mining facilities operating in Canada were subject to the Regulations. No metal mines were subject to the Regulations in Alberta or Prince Edward Island. Those facilities subject to the Regulations are listed in Table 1 and their locations are illustrated in Figure 1. Additional information on the facilities is provided in Appendix A.

OVERALL COMPLIANCE ASSESSMENT FOR PRESCRIBED DELETERIOUS SUBSTANCES AND pH IN 2009

- Overall, the metal mining sector is achieving over 99% compliance with the prescribed limits for copper, nickel, zinc and pH, and a 100% compliance rate for arsenic, cyanide, lead and radium 226.
- Only a few sporadic exceedances were reported for copper, nickel and zinc.
- Vale Inco – Copper Cliff Complex exceeded the pH requirements on multiple occasions.
- In 2009, the overall compliance rate achieved by the metal mining sector with respect to meeting the total suspended solids limits was 94.5%. Complexe métallurgique Sorel-Tracy, MAX Molybdenum Mine and Mill, and Wabush Mines Joint Venture – Scully Mine failed to consistently meet total suspended solids limits.

OVERALL ASSESSMENT OF RESULTS OF RAINBOW TROUT ACUTE LETHALITY AND *DAPHNIA MAGNA* MONITORING TESTS IN 2009

- Overall, the metal mining sector has achieved a compliance rate of 96.2% with respect to effluent that is non-acutely lethal to rainbow trout.
- In 90.7% of the *Daphnia magna* monitoring tests, the mortality rate was less than the targeted level of 50%.

COMPARISON OF PERFORMANCE OF METAL MINES IN 2008 AND 2009

- In 2009, 6 additional mines were subject to the Regulations (i.e., 104 facilities in 2009 compared with 98 in 2008).
- In 2009, 192 final discharge points were subject to the Regulations, compared with 181 in 2008.
- The total number of exceedances decreased from 130 in 2008 to 98 in 2009.
- In 2009, metal mines achieved a 100% compliance rate for arsenic, cyanide, lead and radium 226. The compliance rate for copper dropped slightly from the 99.7% reported in 2008 to 99.5% in 2009. The compliance rate for nickel increased slightly from 99.2% in 2008 to 99.5% in 2009. The compliance rate for zinc remained unchanged: 99.7% in both years.
- Vale Inco – Copper Cliff Complex exceeded the pH requirements on multiple occasions.
- The overall compliance rate for total suspended solids increased slightly from 93.8% in 2008 to 94.5% in 2009. Although most total suspended solids exceedances reported were sporadic, a limited number of facilities seemed to have chronic exceedances for at least one of their effluents in 2009. Complexe métallurgique Sorel-Tracy, MAX Molybdenum Mine and Mill, and Wabush Mines Joint Venture – Scully Mine reported numerous effluent exceedances for total suspended solids.
- In 2009, the compliance rate for non-acutely lethal effluents to rainbow trout was 96.2%, compared with 95.5% in 2008. A low compliance rate was achieved by the Voisey's Bay Mine – Mill facility in Labrador.
- Between 2008 and 2009, a decrease was observed in *Daphnia magna* monitoring tests. More specifically, 90.7% of the tests showed the mortality rate was less than 50% in 2009 compared with 91.6% of the tests in 2008. The numerous tests conducted by Trout Lake Mine and Voisey's Bay Mine – Mill for which the mortality rate was greater than 50% contributed to decreasing the overall compliance rate of the sector.

The data were compiled by the Mining Section of Environment Canada. Except where noted, data are generally presented as provided by the owners or operators of the mines in their submitted annual reports. Occasionally, quarterly reports were used to correct or complete missing information that had not been properly reported by the owner or operator of a mine. For these facilities, a comment was added in the appropriate summary tables presented in Appendix D to identify which missing information had not been submitted as part of the annual report.

Pursuant to sections 9 and 10 of the Regulations, 192 final discharge points were identified as being subject to the Regulations. The distribution of facilities and final discharge points per jurisdiction is shown in Table 2. The number of final discharge points per facility ranged from 1 to 11, as illustrated in Table 3. Reported data indicate that 69 final discharge points had continuous discharge, 78 had intermittent discharge and 45 did not have any discharge in 2009.

The tables presented in Appendix C summarize the effluent quality data for mines subject to the Regulations in 2009. Table C1 summarizes the distribution of the non-compliant parameters for metals and pH, whereas Table C2 summarizes the results of rainbow trout acute lethality tests and *Daphnia magna* monitoring tests. Data for each individual final discharge point for mines subject to the Regulations in 2009 are listed in Appendix D.

Overall, the metal mining sector achieved over 99% compliance with the prescribed limits for metals, cyanide and pH. Only a few sporadic exceedances were reported for copper, nickel and zinc. Metal mines achieved 100% compliance for prescribed limits for arsenic, cyanide, lead and radium 226. One mine reported a high number of exceedances for pH. Some mines were challenged to routinely meet total suspended solids limits, and the overall compliance rate was 94.5% (Table 4).

With respect to rainbow trout acute lethality tests, the metal mining sector has achieved a non-acutely lethal effluent compliance rate of 96.2%. In 90.7% of *Daphnia magna* monitoring tests, the mortality rate was less than 50%. The Regulations do not require effluents from metal mines to be non-acutely lethal to *Daphnia magna*. The addition of this species to the definition of acutely lethal effluent will be considered once sufficient data are available.

In 2009, 98 exceedances of the prescribed limits for metals and pH were reported (Table 5). Total suspended solids exceedances accounted for 72.4% of the total, metals for 16.4% of the total, and pH for 11.2% of the total. Sixty-one facilities complied with the maximum authorized monthly mean concentrations and pH at all times. Thirty-two facilities reported at least one exceedance in 2009. Figure 2 shows the distribution, by jurisdiction, of all the facilities subject to the Regulations in 2009, as well as the number of facilities for which exceedances were reported. The distribution of exceedances by jurisdiction is shown in Figure 3.

The distribution of exceedances that were reported in 2009 per jurisdiction is as follows:

- 36.8% occurred from facilities located in Newfoundland and Labrador;
- 25.5% occurred from facilities located in Quebec;
- 22.4% occurred from facilities located in Ontario;
- 8.2% occurred from facilities located in British Columbia;
- 5.1% occurred from facilities located in Manitoba;
- 1.0% occurred from facilities located in New Brunswick;
- 1.0% occurred from facilities located in Yukon.

No exceedance was reported from mines located in Saskatchewan, Northwest Territories, Nunavut or Nova Scotia (Table 6).

The distribution of exceedances by mining subsector is presented in Table 7. The iron ore subsector accounted for 50% of all exceedances, the base metals subsector for 36.7%, and the precious metals subsector for 13.3%. No exceedances were reported from the uranium subsector.

In 2009, 35 tests from 13 facilities were reported to be acutely lethal to rainbow trout (Table 8). Of those, 68.6% were from facilities located in Newfoundland and Labrador, 11.4% in Quebec, 11.4% in Manitoba, 5.7% in Ontario and 2.9% in Yukon. None of the effluent tested in British Columbia, Saskatchewan, Northwest Territories, Nunavut, New Brunswick or Nova Scotia was acutely lethal to rainbow trout. On a sectoral basis, 74.3% were from the base metals subsector, 17.1% from the iron ore subsector, and 8.6% from the precious metals subsector. The uranium subsector had no rainbow trout acute lethality test failures (Table 9).

In 2009, 86 tests from 17 facilities had a *Daphnia magna* mortality rate greater than 50% (Table 8). Newfoundland and Labrador had the highest percentage (66.2%) of tests in which *Daphnia magna* mortality was greater than 50%, followed by Manitoba (20.9%), British Columbia (3.5%), Quebec (3.5%), Ontario (2.3%), Yukon (1.2%), Nunavut (1.2%) and New Brunswick (1.2%). Saskatchewan, Northwest Territories and Nova Scotia had no *Daphnia magna* mortality rate greater than 50%. On a sectoral basis, 93% were from the base metals subsector, 5.8% from the precious metals subsector, 1.2% from the iron ore subsector, and none from the uranium subsector (Table 9).

The Regulations are enforced by Environment Canada in accordance with the provisions of the Compliance and Enforcement Policy for the Habitat Protection and Pollution Prevention Provisions of the *Fisheries Act*. Enforcement personnel administer the provisions and accompanying regulations with an emphasis on preventing harm to fish, fish habitat or human use of fish caused by physical alteration or pollution of waters frequented by fish.

In verifying compliance with the Regulations, inspectors abide by the Enforcement and Compliance Policy, which sets out a range of possible responses to offenses, including warnings, inspector's directions, ticketing, ministerial orders, injunctions, prosecution and civil suits by the Crown for the recovery of costs. If an inspector confirms that an infraction has been committed, the inspector will select the appropriate response based on the following criteria: nature of the offense; effectiveness in achieving the desired result with the offender; and consistency.

Appendix C: Performance Summary of Mine Effluents in 2009

Note to the Reader

The tables presented in this appendix summarize the effluent quality data for mines subject to the *Metal Mining Effluent Regulations* (MMER) in 2009. The summaries include site identification (i.e., mine/mill name and effluent discharge name) and number of months of discharge. Table C1 summarizes the distribution of the non-compliant parameters for metals and pH, whereas Table C2 summarizes the results of rainbow trout acute lethality tests and *Daphnia magna* monitoring tests. Metal exceedances represent the number of monthly mean concentrations that exceeded the prescribed limits for a given month, whereas pH exceedances represent the number of times that the monthly pH range was exceeded. The parameters included are arsenic (As), copper (Cu), cyanide (CN), lead (Pb), nickel (Ni), zinc (Zn), total suspended solids (TSS), total radium 226 (Ra-226), and pH.

Appendix D: Effluent Quality Data for Mines in 2009

Note to the Reader

The tables presented in this appendix show the summary of the monthly monitoring results of each final discharge point identified pursuant to sections 9 and 10 of the *Metal Mining Effluent Regulations*. Effluent results were provided to Environment Canada pursuant to section 22 of the Regulations, which requires mines to submit annual reports to Environment Canada. The format for these reports is specified in Schedule 6 of the Regulations. Data are presented as provided by the owners or operators of the mines except where comments indicate that some data were added for completeness based on quarterly reports.

Supporting information includes:

- Mine/Mill Name
- Mine/Mill Operator Name
- Mine/Mill Product(s)
- Mine/Mill Address
- Identification of Final Effluent Discharge Point
- Parameter Limits
- Monthly Mean Concentrations of the Deleterious Substances
- Monthly pH Range (Low and High)
- Monthly Effluent Volume
- Results of Rainbow Trout Acute Lethality Tests
- Results of *Daphnia magna* Monitoring Tests
- Comments (if applicable)

Highlighted data indicate that a Monthly Effluent Quality Standard was exceeded for a given month. A “Pass” for the rainbow trout acute lethality test and the *Daphnia magna* monitoring test indicates that the percentage of mortality was less than or equal to 50%. A “Fail” indicates that the percentage of mortality was greater than 50%. Tables are sorted in alphabetical order based on mine/mill name.
