

CASE NUMBER: 04F-40-A2.3-19

DATE: May 22, 2004

**HISTOPATHOLOGY:**

Slide 51, A2.3-19-1:

There are no significant lesions in the liver, anterior kidney, spleen or heart.

Slide 52, A2.3-19-2:

1). Heart, epicardium: Epicarditis, mild to moderate, focal, granulomatous, chronic

There are no significant lesions in the liver, anterior kidney or spleen.

Slide 53, A2.3-19-3:

1). Kidney, inter-renal gland: Hyperplasia, moderate, multifocal

2). Kidney, sinusoids: Erythrophagocytosis, mild, multifocal, random, subacute

There are no significant lesions in the liver, spleen or heart.

**COMMENTS:**

There are no significant lesions within the examined tissues. The inter-renal gland hyperplasia is consistent with smoltification and the erythrophagocytosis is non-specific and may reflect senescence, sepsis, and other disease entities. Due to the relatively limited extent and lack of microscopic change within additional tissues, this process is not considered pathologically significant.

**\*FINAL REPORT\***
