Subject: RE: Media lines - fish disease

Diane,
I made a few changes. 

As for the brain lesions, these data came from a briefing note to the Minister dated Dec 2009, at which time we merely speculated that there could be a link, as we observed this signature also in brain tissue. We have since conducted studies that showed that there is no link between this signature and the lesions, and have determined that the lesions are hemorrhagic (aneurisms), not tumours. We are still pursuing research into the potential relevance of the brain aneurisms and that of this genomically-defined disease.

THanks,
Kristi

Hi Kristi <<ML_FishDisease.doc>> :

I would like to started running this through approvals, (it takes awhile) and when the paper is published in Science Magazine, I will insert the correct time line in the doc.

For your sign off.

Thanks

Diane
